EXAMINER'S COMMENT

Information Disclosure Statement

1. The following references cited on the information disclosure statement filed July 27, 2006 have not been considered because they fail to comply with the provisions of 37 CFR 1.97, 1.98 and MPEP § 609 because:

(A) the reference JP 59111533 (i.e., Reference "AU" on Sheet 1 of 3) is not in accordance with 37 CFR 1.98(a)(3)(i). It has no proper concise explanation of relevance because the English language abstract has been translated in a manner replete with errors to the extent that it is confusing and cannot be properly understood. Note Appendix A attached hereto.

(B) the reference WO 01/15718 (i.e., Reference "AM" on Sheet 1 of 3) is not relevant.

(E) the reference 5,023,023 (i.e., Reference "AA" on Sheet 1 of 2) is not listed in accordance with 37 CFR 1.98(b)(1) because the patent number does not match the inventor and issue date. Presumably, the reference should be listed as "4,023,023".

Applicant is advised that the date of any re-submission of any item of information contained in this information disclosure statement or the submission of any missing element(s) will be the date of submission for purposes of determining compliance with the requirements based on the time of filing the statement, including all certification requirements for statements under 37 CFR 1.97(e). See MPEP § 609.05(a).

In the interest of compact prosecution, applicant is requested to refrain from submitting duplicate listings of references that have already been considered.

Abstract of JP59111533

PURPOSE: To accelerate the arithmetic speed by dividing a memory part into plural groups to write the data read out by a command to the memory part of a group and the data on the arithmetic result to the memory part of the other group respectively.

CONSTITUTION: The data read out by a command is written to a memory part of one of plural divided groups of memories along with the data on arithmetic result written to a memory of the other group respectively. Thus the data is read and written at a time. For instance, the data D2 is read out of a designated address of a memory element 2 and held at an input holding part 5 together with the input data D4 to be calculated. Then data D5 and D7 are supplied to an arithmetic device 4 to perform an operation. The data D3 calculated by the device 4 is held at an output holding part 6, and at the same time the device 4 is replaced for the next calculation. Then the data D6 on the arithmetic result held at the part 6 is stored in a memory element 7. Meanwhile the replaced data is supplied to the device 4 to give an operation to the next replaced data.
